

## Conserving water is good for all of us.

Using less water means less energy is used to treat it, pump it, and distribute it. By conserving water, you are helping maintain our natural resources.

We can all help by going low-flow!

How many times a day do you turn on the tap in your home?

Between the bathroom, kitchen, and laundry, chances are there's a lot of water flowing through the pipes in your home—and plenty of opportunities to waste it. With just a little effort, you can save thousands of gallons of water every year. And that's good for your wallet, the environment, and our planet.
