

At least 30 percent of water

used annually by a single-family suburban household is for outdoor irrigation. A large portion of that goes to waste through evaporation or runoff caused by over-watering. The landscaping tips in this brochure will help you conserve water—and save money.

Conserving water is good for all of us.

Using less water means less energy is used to treat it, pump it, and distribute it. By conserving water, you are helping maintain our natural resources.

We can all pitch in and slow the flow!
